

event_id,neurochemical_domain,molecular_event,primary_compartment,acute_synaptic_effect,circuit_level_signature,expected_readout,clinical_relevance_context,evidence_tier,citation_key,teaching_level,revision_status

NEUROBIOC-0001,Glutamatergic Signaling,NMDA receptor Mg²⁺ block relief during coincident depolarization,Postsynaptic dendritic spine,Ca²⁺ influx and coincidence detection,Input-specific strengthening in active ensembles,Increased EPSP amplitude after high-frequency pairing,Learning and memory encoding frameworks,Textbook,KANDEL2021,Foundational,stable

NEUROBIOC-0002,Glutamatergic Signaling,AMPA receptor insertion following LTP induction,Postsynaptic density,Increased fast excitatory transmission,Higher gain in engaged microcircuits,Upward shift in AMPA-mediated current,Plasticity-related adaptation in cortical/hippocampal networks,Textbook,PURVES2018,Foundational,stable

NEUROBIOC-0003,GABAergic Inhibition,Reduced GABA-A receptor conductance,Postsynaptic soma/proximal dendrite,Weakened inhibitory shunt,Elevated excitability and synchronization risk,Lower IPSC amplitude and shorter inhibitory control window,Hyperexcitability-prone network states,Textbook,BEAR2020,Foundational,stable

NEUROBIOC-0004,Chloride Homeostasis,KCC2 downregulation with intracellular Cl⁻ accumulation,Neuron membrane transport system,GABA reversal potential shifts depolarizing,Inhibition-to-excitation polarity drift,Depolarizing GABA response in patch recordings,Developmental and injury-related inhibitory instability,Review,KAILA2014,Intermediate,stable

NEUROBIOC-0005,Dopaminergic Modulation,D1 receptor cAMP/PKA amplification in striatal pathway,Medium spiny neuron intracellular signaling,Facilitated excitatory integration in D1-expressing cells,Bias toward direct-pathway output,Increased phosphorylation of DARPP-32 targets,Action selection and reinforcement signaling contexts,Textbook,NESTLER2015,Intermediate,stable

NEUROBIOC-0006,Dopaminergic Modulation,D2 receptor-mediated Gi signaling and reduced cAMP,Medium spiny neuron intracellular signaling,Suppressed excitability in D2-expressing cells,Bias in indirect-pathway gating,Reduced cAMP-linked phosphorylation markers,Motor/cognitive gating balance contexts,Textbook,NESTLER2015,Intermediate,stable

NEUROBIOC-0007,Monoamine Clearance,DAT inhibition with prolonged synaptic dopamine,Dopamine synapse,Extended dopaminergic signaling window,Altered temporal precision of reward coding,Slower dopamine clearance curves,Reinforcement and impulsivity-related circuit dynamics,Review,GRACE2016,Intermediate,stable

NEUROBIOC-0008,Cholinergic Signaling,Nicotinic receptor activation increases presynaptic release probability,Presynaptic terminal,Enhanced transmitter release at target synapses,State-dependent amplification of attention circuits,Increased miniature event frequency,Attention/arousal-linked neuromodulation frameworks,Textbook,PURVES2018,Foundational,stable

NEUROBIOC-0009,Serotonergic Modulation,5-HT_{1A} receptor Gi signaling reduces neuronal firing

bias,Soma and axon initial segment,Reduced excitability tone,Shifted network set-point under serotonergic tone,Lower spontaneous firing rate,Stress-affect regulatory circuit models,Review,ALBERT2019,Intermediate,stable

NEUROBIOC-0010,Energy Metabolism,Astrocyte-neuron lactate support during high activity,Astrocyte-neuron metabolic interface,Supports sustained synaptic transmission,Stabilized firing during demand peaks,Preserved firing under glucose stress with lactate availability,Activity-dependent metabolic resilience in neural tissue,Review,MAGISTRETTI2018,Intermediate,stable

NEUROBIOC-0011,Oxidative Stress,ROS elevation impairs mitochondrial ATP support,Mitochondria,Reduced ATP-dependent ion homeostasis,Failure of high-frequency fidelity,Increased spike failure during sustained stimulation,Neurodegeneration-linked bioenergetic stress contexts,Review,LINMT2012,Advanced,stable

NEUROBIOC-0012,Calcium Signaling,Excess intracellular Ca²⁺ activates proteases and stress pathways,Neuron cytosol and organelles,Destabilized membranes and protein integrity,Progressive connectivity loss in vulnerable nodes,Elevated calcium-dependent injury biomarkers,Excitotoxic injury models,Textbook,KANDEL2021,Intermediate,stable

NEUROBIOC-0013,Membrane Electrophysiology,Voltage-gated Na⁺ channel availability sets AP upstroke reliability,Axon initial segment and nodes,Controls spike initiation robustness,Alters timing precision across projection pathways,Shift in threshold and dV/dt max,Conduction fidelity and excitability phenotypes,Textbook,BEAR2020,Foundational,stable

NEUROBIOC-0014,Membrane Electrophysiology,Delayed-rectifier K⁺ current governs repolarization window,Axon and soma,Shapes refractory period and spike width,Controls high-frequency coding capacity,AP half-width and interspike interval changes,Frequency coding and fatigue susceptibility contexts,Textbook,BEAR2020,Foundational,stable

NEUROBIOC-0015,Protein Aggregation,Misfolded protein burden overwhelms proteostasis networks,Neuron proteostasis systems,Reduced synaptic protein availability,Network degradation in vulnerable circuits,Progressive loss of synaptic marker intensity,Proteinopathy-associated circuit decline models,Review,SELKOE2016,Advanced,stable

NEUROBIOC-0016,Myelination Biology,Oligodendrocyte myelin disruption reduces conduction velocity,Myelinated axon,Temporal dispersion of spike propagation,Desynchronization across long-range pathways,Increased latency and reduced phase locking,White-matter-dependent processing efficiency contexts,Textbook,PURVES2018,Foundational,stable

NEUROBIOC-0017,Neuroinflammation,Microglial cytokine signaling alters synaptic pruning balance,Glia-synapse interface,Shifted synapse elimination/maintenance equilibrium,Connectivity remodeling with potential maladaptation,Change in spine density over time,Inflammation-associated cognitive and mood circuit models,Review,SALTER2017,Intermediate,stable

NEUROBIOC-0018,Endocannabinoid Signaling,Retrograde endocannabinoid suppression of presynaptic release,Pre-to-post synaptic loop,Transient reduction in release probability,Dynamic gain control during heightened activity,Short-term depression signatures,Homeostatic dampening

of overactive pathways,Textbook,KANDEL2021,Intermediate,stable

NEUROBIOC-0019,Second Messenger Systems,cAMP-PKA-CREB signaling supports activity-dependent transcription,Nucleus and cytosol,Consolidation of long-term synaptic changes,Stabilized ensemble-level memory traces,Increased CREB-linked transcription markers,Long-term adaptation and memory consolidation

models,Textbook,KANDEL2021,Intermediate,stable

NEUROBIOC-0020,BBB and Transport,Blood-brain barrier transporter shift changes neurochemical exposure,Neurovascular unit,Altered extracellular chemical milieu,Network sensitivity shift to peripheral signals,Transporter expression/activity changes,Drug response variability and neurotoxic vulnerability contexts,Review,ABBOTT2010,Advanced,stable
